Rai University,
Saroda, Dholka Taluka,
Ahmedabad, Gujarat – 382260

RAI SCHOOL OF ENGINEERING
Subject Name
LIST OF EXPERIMENTS

Sr.No	Name of Experiment	Date	Page	Grade	Signature
1	Write a MongoDB command to create a database named students.		1		
2	Create a collection named courses using MongoDB.		1		
3	Insert a single document into the students collection.		1		
4	Write a NoSQL command to find all documents in a collection.		2		
5	Insert multiple documents into a MongoDB collection in a single query.		2		
6	Find a document in MongoDB based on a field value.		2		
7	Update a document's field in a MongoDB collection.		2		
8	Delete a document from a MongoDB collection.		2		
9	Write a MongoDB aggregation query to calculate the average age of users.		3		
10	List all the collections in a MongoDB database		3		
11	Set a key-value pair in Redis.		3		
12	Retrieve the value of a key from Redis.		4		
13	Delete a key-value pair in Redis.		4
